

🔑 Authentication

All API requests require an API key sent in the `X-API-Key` header.

```
// Request headers
{
  "Content-Type": "application/json",
  "X-API-Key": "your_api_key_here"
}
```

Generate API Key

POST /generate-api-key

Requires JWT authentication. Returns a new API key for your account.

Rate Limits

200
REQUESTS/MIN
General API

150
REQUESTS/MIN
Purchases

120
REQUESTS/MIN
Balance Checks

Every response includes a `rateLimit` object showing your remaining requests and reset time.

```
// Rate limit info in every response:
"rateLimit": {
  "limit": 150,      // max requests per minute
  "remaining": 147,  // requests left before limit
  "resetInSeconds": 45 // seconds until counter resets
}
```

```
// Also available as response headers:
// X-RateLimit-Limit: 150
// X-RateLimit-Remaining: 147
// X-RateLimit-Reset: 45
```

DATA BUNDLES

MTN UP2U
AirtelTigo iShare
Telecel Bundle **NEW**

CONTACT US

Email
support@datamartgh.shop
Location
Accra, Ghana
Hours
Mon - Sun: 8AM - 9PM

Send up to **50 orders** in a single request. The system validates all orders and checks your total balance upfront before processing.

HEADERS

REQUEST BODY

```

"orders": [
  {
    "phonehash": "4551334567",
    "network": "TELLO",
    "capacity": "50",
    "ref": "RV-001" // Optional - your own reference
  },
  {
    "phonehash": "8001234567",
    "network": "TELCEL",
    "capacity": "20",
    "ref": "RV-002"
  },
  {
    "phonehash": "8271234567",
    "network": "AT_TPRM100",
    "capacity": "2"
  }
]
}

```

RESPONSE

```

    "status": "success",
    "message": "Bulk order processed: 3 added, 0 failed",
    "data": {
      "summary": {
        "total": 3,
        "successes": 3,
        "failures": 0,
        "invalid": 0,
        "totalCharged": 42.50,
        "remainingBalance": 157.50
      },
      "results": [
        {
          "idno": 1,
          "exp": "99-001",
          "phoneNumber": "9051216562",
          "network": "Vt110r",
          "capacity": "3",
          "price": 23.00,
          "status": "quashed",
          "purchaseId": "6091a083...",
          "orderReference": "99-001",
          "transactionReference": "18x...",
          "balanceBefore": 200.00,
          "balanceAfter": 177.00
        }
      ]
    },
    "validations": {}
  }
}

```

How It Works

Limits: Maximum 50 orders per request. Each order must have phoneNumber, network, and capacity. The ref field is optional for your own tracking.

Insufficient Balance Error

```
{
  "status": "error",
  "message": "Insufficient wallet balance for this bulk order",
  "data": {
    "totalCost": 250.00,
    "walletBalance": 100.00,
    "validOrders": 5,
    "shortfall": 150.00
  }
}
```

Idempotency

- Generate one fresh UUID per batch and send it in X-Idempotency-Key. The whole batch is one logical request — don't use per-order keys here.
- If the same key is seen again within 24h on the same API key, we return the original batch response — wallet is not re-charged and orders are not re-queued.
- Safe retry: on network timeout or 5xx, retry with the same key. Never retry with a new key after a timeout — you will double-charge the entire batch.
- Requests already being processed return 409 REQUEST IN PROGRESS.

Heads up: currently optional but will become required. API requests that omit it are being logged so affected resellers get notified before the cut-over. Start sending it now.

Experiments

```
curl -X POST https://api.datanorth.shop/api/bulk-purchase \
-H "X-API-Key: $DN_API_KEY" \
-H "X-Idempotency-Key: $(uuidgen)" \
-H "Content-Type: application/json" \
-d '{"orders":[{"shopname":"8853234567","skuarr":["YB10","casioctv"],"q":["5","ref"],"pr":["001"]}]' }
```

 Order Status

GET /order-status/:reference

Check the status of an order using its **orderReference**.

```
{
  "status": "success",
  "data": {
    "orderId": "60f1e5b3e6b39812345678",
    "reference": "GN-AB12CD34",
    "phoneNumber": "0551234567",
    "network": "YELLOW",
    "capacity": 5,
    "price": 23.00,
    "orderStatus": "completed",
    "processingMethod": "geonettech_api",
    "createdAt": "2024-01-15T10:28:00.000Z",
    "updatedAt": "2024-01-15T10:30:00.000Z"
  }
}
```

> Live Delivery Tracker

Track your orders in real-time as they move through our delivery pipeline.

Two ways to get delivery updates — choose what suits you

Both methods give you the same live data. Pick the one that fits your setup.

Method 1: Widget

One script tag — we handle everything. Beautiful pre-built UI that auto-updates. No coding needed.

RECOMMENDED

Method 2: API Endpoint

Full JSON response — build your own custom UI. Poll every 10-30 seconds for live updates.

FOR CUSTOM UI

Method 1: Embeddable Widget

Paste one line, your customers see live delivery tracking instantly.

Live Preview — this is what your customers see

Dark Light

Delivery Tracker · Live

Yello portal is processing orders steadily. Estimated delivery 1-2 hours

Install — paste before </body>

```
<script src="https://api.datamartgh.shop/widgets/delivery-tracker.js" data-api-key="YOUR_API_KEY" data-theme="dark"></script>
```

Floating (default)

Buttons in the corner, click to open panel.

```
<script src="...delivery-tracker.js" data-api-key="KEY" data-position="bottom-right"></script>
```

Inline (in your page)

Embeds inside a div, no floating button.

```
<div id="tracker"></div><script src="...delivery-tracker.js" data-api-key="KEY" data-container="tracker"></script>
```

Widget Options

data-theme

dark | light

data-position

bottom-right | bottom-left | top-right | top-left

data-poll

seconds (default 10)

data-container

div ID for inline mode

Method 2: API Endpoint

Build your own UI — poll this endpoint every 10-30 seconds.

GET /delivery-tracker

```
{  "status": "success",  "data": {    "message": "Delivery scanner is actively checking orders...",    "scanner": {      "active": true,      "waiting": false,      "outflows": 0    },    "stats": {      "checked": 45,      "delivered": 38,      "partial": 3,      "pending": 4,      "failed": 0    },    "lastDelivered": {      "trackingId": "1557392",      "summary": "Tracking #1557392 — placed at Apr 03, 10:03 AM, delivered at Apr 03, 11:51 AM"    },    "checkingNow": {      "summary": "Checking now: Batch #1557879"    },    "yourOrders": {      "inCurrentBatch": [        {          "phone": "855****567",          "network": "YELLO",          "capacity": 5,          "deliveryStatus": "Sent"        }      ],      "inLastDeliveredBatch": [...]}  } }
```

Scanner States

- Active — Scanner is checking deliveries
- Waiting — Paused between checks
- Idle — Scanner is not running

Tip: Combine this with webhooks for the best experience — use the tracker for a live display, and webhooks for instant per-order delivery notifications.

DataMart Developer API v2

Webhooks

How do I get my webhook secret?

1. Enter your API Key below and set your Webhook URL.

2. Select the events you want to receive and click Save

3. Your webhook secret will be shown once after saving — copy it immediately

4. Use this secret to verify the X-DataMart-Signature header on incoming webhooks

The secret is only displayed once at configuration time. If you lose it, delete and reconfigure your webhook to get a new one.

Configure Webhook

Enter your API Key to load webhook config

Load My Webhook

Setup in 3 Steps

1 Get your API key
Go to your dashboard and generate an API key if you haven't already.

2 Paste the script tag
Add one line before `</body>` in your HTML.

3 Done! Widget auto-updates
The widget polls every 15 seconds and shows your customers live delivery status.

Configuration Options

Attribute	Default	Description
data-api-key	required	Your DataMart API key
data-theme	dark	dark or light
data-position	bottom-right	bottom-right bottom-left top-right top-left
data-poll	15	Refresh interval in seconds (min 5)
data-container	—	ID of a div to embed inline (no floating button)

Floating Mode

A button appears in the corner. Users click to open the tracker panel.

```
<script src="https://api.datamartgh.shop/widgets/delivery-tracker.js" data-api-key="YOUR_API_KEY" data-theme="dark" data-position="bottom-right"></script>
```

Inline Mode

Embeds directly inside a div on your page — no floating button.

```
<div id="tracker"></div><script src="https://api.datamartgh.shop/widgets/delivery-tracker.js" data-api-key="YOUR_API_KEY" data-theme="light" data-container="tracker"></script>
```

What Your Customers See
